

RADON - A Radioactive gas that can seep into your home

COMMON RADON ENTRY POINTS

- 1** Soil
- 2** Cracks in the floor and walls connected with the soil
- 3** Gaps around pipe fittings and support posts in the foundation
- 4** Floor drains & sump pits

**SEE HOW TO HELP PROTECT
YOU AND YOUR FAMILY...**

RADON CAN SEEP INTO A HOME THROUGH CONNECTIONS WITH THE SOIL INCLUDING SUMP PITS, CRACKS IN FOUNDATION WALLS, FLOORS OR CRAWLSPACES AND FLOOR DRAINS.

The most effective way to reduce radon levels in a home is through a process call active soil depressurization. It involves installing a pipe with a fan into the slab or crawlspace of the home. The fan draws radon from the ground and expels it through a pipe to a vent outside the house.

If your home requires radon mitigation, make sure you hire a contractor who is certified by the Canadian National Radon Proficiency Program (C-NRPP) who has proper training and hands on experience in reducing radon levels in residential construction.

Contact the C-NRPP for information on how to become certified, or to find a certified contractor.
